

Phoebe Instructions for Bases

Tri-base

Push the connector plate onto the leg until it reaches the vertical line stop mark adjacent to the slot.

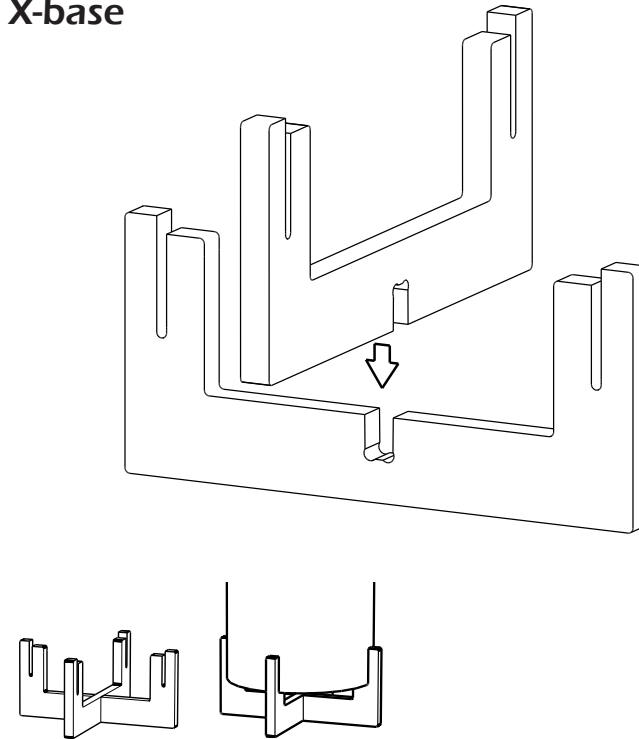

The pieces are designed to be tight fitting so moderate force is required to push them together.

Once all 3 legs are attached to the connector plate, slide your Phoebe lamp shade into the vertical slots.

Note.

- It is important that the connected is pushed all the way to the stop mark otherwise the lamp shade will be stretched and distorted from its cylindrical form.
- No glue is required but PVA glue can be used if desired.

X-base

Push the two base pieces together until the bottom faces align.

The pieces are designed to be tight fitting so moderate force is required to push them together.

Note.

- No glue is required but PVA glue can be used if desired.
